GitOps in a nutshell

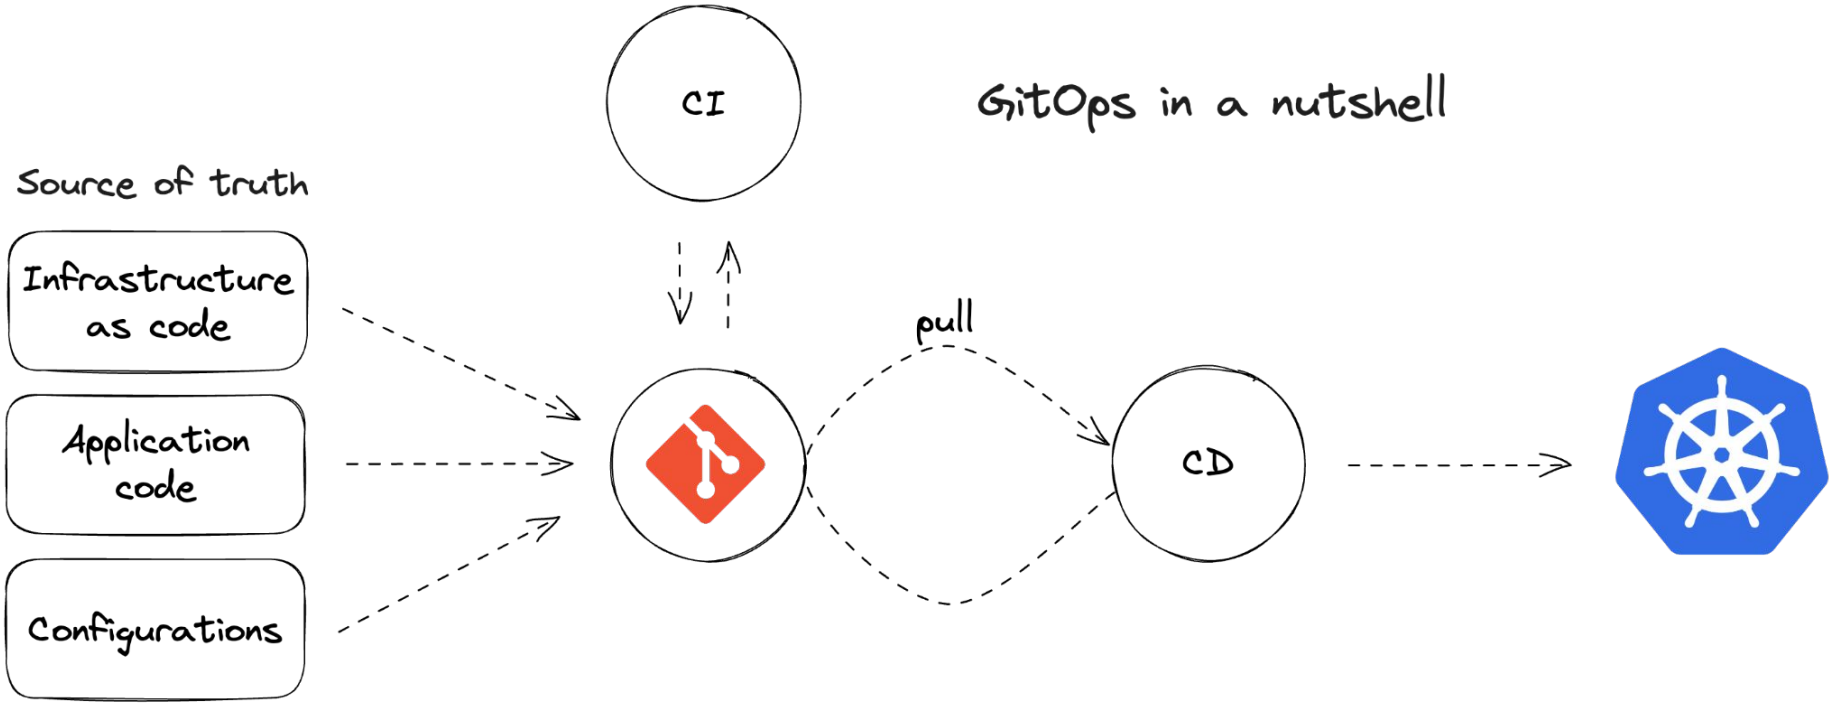

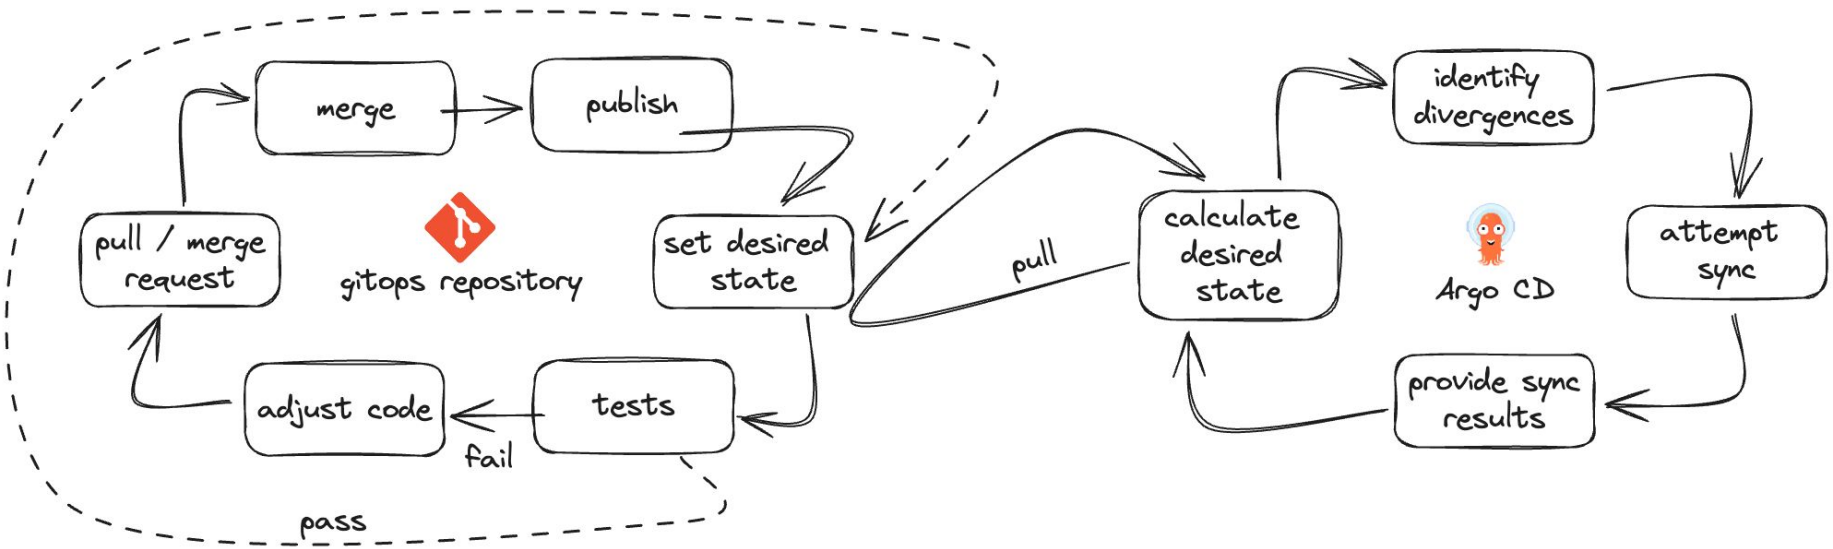

Photo by Peter Burdon on Unsplash

merge
publish
pull / merge request
gitops repository
set desired state
adjust code
tests
fail
pass
pull
identify divergences
calculate desired state
Argo CD
attempt sync
provide sync results

Benefits

- Familiar tools and processes
- Faster deployment/iteration + easily reproducible
- No cluster drift
- Greater collaboration
- Auditability
- More secure & simplification of access controls
- Cost saving
- Easily revert/rollback changes
- Simple stateless disaster recovery model
